The new Import feature in AutoCAD enables you to import markup data from external sources such as forms or PDF documents into your CAD drawings. Incorporate this data into the current drawing or edit it in a separate drawing. The new Markup Assist tool allows you to quickly incorporate feedback and edits into existing drawings. This tool is context sensitive: it depends on the current drawing active in the drawing area. Drawing Controls improvements: Ability to see all controls on a control bar, by simply clicking a menu item on the control bar. Layers can be automatically added to your drawing area. When you turn off solid shading on a drawing, the 3D layer is automatically turned off. You can now choose to turn off the 3D layer separately for individual objects, or choose to turn off the 3D layer for the entire drawing. You can now adjust the color of your text and annotation colors when your font color is adjusted. The previous versions of AutoCAD allowed you to change the default color of a graphic object by right-clicking on it and selecting Change Object Appearance. In this version of AutoCAD, you can simply select the color from the palette that appears. You can now scroll through toolbars using the keyboard. Additional keyboard shortcuts for the text and annotation tools. You can now continue editing an annotation even after the first edit has been accepted. Objects can now be automatically saved in a specific folder in the application data folder. When you highlight a block in 3D or annotation and cut it to create an assembly, the resulting assembly can be previewed with the associated part annotation, or with selected parts only. Edit points and dimensions can be automatically adjusted based on the points or dimensions selected in the part annotation. You can now enter numbers using scientific notation. You can now switch between drawing view and 3D view with a keyboard shortcut. When you select a drawing, you can now see a ribbon with frequently used commands on the left side of the screen. You can now cut, copy, and paste multi-part annotations. When you are in a drawing view, you can create new dimension objects with a keyboard shortcut, and you can enter text in a new dimension. You can now view or edit the current object's legend.
