Strivr is a lightweight wrapper for and decompiler of the popular.NET Framework. Since its beginning, Strivr has been known for it's speed, accuracy, and polish. The Strivr engine employs advanced heuristics to accurately and quickly decompile target assemblies. Strivr's API is framework agnostic and allows both.NET and Java developers to decompile targeted assemblies without dealing with any specific framework. Unlike other decompilers, Strivr does not perform any incremental step by step decompilation of source files. Each source file is decompiled to the corresponding assembly one time only. After decompilation, Strivr introduces the following features: * Folders * Source code navigation and browsing * Navigation in projects and solution * Assembly metadata (classes, properties, etc.) * Code folding * Decompiler performance indicators * Integrated debugger After decompilation, Strivr can be used in a quick way to decompile a code to its source code. Using generated metadata, you can navigate directly to the source code location from decompiled output. Strivr's Rich Scripting Engine (.NET) Scripting can be performed on decompiled assemblies. With the help of the script engine, the developer can explore decompiled source code and extract assembly metadata.
