The sequence of the plasmids of different corynebacteria species has been determined. The data obtained allowed the assumption that the plasmids of corynebacteria had common ancestors and were genetically related. The data obtained also showed that the plasmids of corynebacteria were functionally related. The specific features of plasmid replication-and-transcription systems have been described.Altered phospholipid and free fatty acid composition of liver mitochondria in obese Wistar rats. The activity of liver mitochondrial acyl-CoA synthetase and the concentrations of phospholipids and free fatty acids were studied in the livers of obese Zucker rats and control Wistar rats. Activity of mitochondrial acyl-CoA synthetase in obese Zucker rats was 30% of that in control rats. Acetyl-CoA was the predominant substrate of the enzyme in both groups of rats, followed by palmitoyl-CoA. The concentrations of phosphatidylethanolamine and phosphatidylcholine in obese Zucker rats were significantly higher than in control rats. The concentrations of stearic and palmitic acids in liver mitochondria of obese rats were higher than those in control rats. The concentration of palmitic acid in the heart of obese rats was lower than that in control rats. In obese Zucker rats, there were no correlations between the mitochondrial activity and the phospholipid composition of liver and heart.Image copyright Reuters A US 5b5f913d15
