In April of 1999, Autodesk acquired dBase, Inc., the creator of dBase III, a popular word processing software product. Since then, Autodesk AutoCAD software has evolved into a powerful software application that is available in a variety of versions designed for different software platforms and hardware. This article describes the features of the 2014 version of AutoCAD (AutoCAD 2014), available as a desktop app (version 14.0) for Microsoft Windows. The desktop version of AutoCAD can also be used as an online service from a web browser. There are three major versions of AutoCAD: AutoCAD LT, AutoCAD LT-Design, and AutoCAD. AutoCAD LT was the first AutoCAD release. It has limited functionality for most users and is designed to work with Windows 2000/XP. AutoCAD LT-Design was released in April 2000 and was intended to provide

more functionality for more users. AutoCAD Design was released in January 2002 and includes major new features, including the ability to create and edit complex drawings, the ability to view and change properties of lines and arcs, layers, and dimensions, a new dimensioning system with sophisticated rules, and a project manager. AutoCAD 2010 was the first release of AutoCAD to support the Autodesk Fusion Development Environment. Since then, Autodesk has continued to improve AutoCAD and release upgrades through 2013. This article describes the major features of the desktop version of AutoCAD 2014, available as version 14.0 of the AutoCAD product. AutoCAD 2014 can be purchased as a standalone application or as a bundle that includes the AutoCAD LT and AutoCAD LT-Design products. To clarify the association between the shape of the acetabulum and the morphology of the acetabulum-femoral head-neck junction (AHNJ), we performed radiographic measurements of

the neck-head ratio, the sacroiliac joint angle, and the center-edge angle of the acetabulum. The neck-head ratio was calculated by measuring the area of the acetabulum at the rim of the acetabulum from the most caudal point of the anterosuperior part of the acetabulum to the apex of the head of the femur from lateral view. The sacroiliac joint angle was calculated by measuring the angle between the line from the center of the sacral endplate to the anterior edge of the sacrum, and the line from the center of the head of the femur to the rim of the acetabulum. The center-edge angle was calculated from a radiograph of the pelvis by measuring the angle between the line from the center of the anterior superior edge of the acetabulum to the center of the femoral head and the line from the center of the anterior superior edge of the acetabulum to the center of the femoral head. The neck-head ratio was 1:1 in 83 hips (84%). ca3bfb1094
